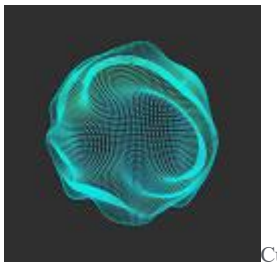
To install Visual Studio Code (VS Code), you must first download the appropriate installer for your operating system (Windows, macOS, or Linux) from the [official Visual Studio Code website] and then run the installation file.

Microsoft +1

## Step-by-Step Installation

The process involves downloading the installer and following the on-screen prompts.



Cuantum Technologies

1. **Download the Installer**:
    - Open your web browser and go to the official VS Code download page.
    - Select the appropriate installer for your operating system:
        - **Windows**: Choose the "User Installer" (x64 or Arm64 is generally recommended) or "System Installer".
        - **macOS**: Download the `.zip` file for Universal or Apple Silicon.
        - **Linux**: Choose the `.deb` package (for Debian/Ubuntu-based distributions) or the `.rpm` package (for Red Hat/Fedora-based distributions).
2. **Run the Installer**:
    - Locate the downloaded file (e.g., in your `Downloads` folder) and double-click it to start the setup process.
3. **Follow the Setup Wizard Prompts**:
    - **Accept the license agreement** by checking the "I accept the agreement" box and clicking **Next**.

- **Choose the installation location**: The default location is usually fine, so click **Next** to accept it.
- **Select additional tasks (Windows only)**: It is recommended to check options like "Create a desktop icon" and "Add 'Open with Code' action to Windows Explorer context menu" for easy access.
- Click **Install** to begin the installation.
- Wait a moment for the installation to complete.

4. **Finish and Launch**:
    - Once the installation is complete, you can optionally check the box to "Launch Visual Studio Code" immediately.
    - Click **Finish** to exit the setup wizard.

## Post-Installation Steps

- **Install Extensions**: VS Code is highly customizable with extensions for various languages (e.g., Python, C++) and tools. Click the **Extensions** icon (four squares) in the sidebar (or press `Ctrl+Shift+X`) and search for the extensions you need.
- **Integrated Terminal**: You can use the built-in terminal by pressing `Ctrl+``` to run commands and launch projects.
- **Launch from Command Line**: For convenient access from any terminal, you can add the `code` command to your system's PATH environment variable.

Visual Studio Code +4

What specific programming language do you plan to use with VS Code, so I can provide guidance on recommended extensions?
